

Sean Hagen

Sean is a Senior Manager and Principal Consultant with Sargent & Lundy Canada Company, with over 35 years of experience in the design, engineering, construction, management and independent oversight of power plant capital and O&M projects. He lead the Point Lepreau Refurbishment Project Oversight team, responsible for providing accurate, independent, and timely feedback and recommendations to NBPower's Board of Directors during the planning and execution of the project. Sean was also a key member of the Gentilly 2 Refurbishment Project Advisory Committee, again ensuring alignment between key project participants and senior executives so that the right decisions could be made based on the right information. Sean is currently supporting Bruce Power's ongoing Major Component Replacement (MCR) project as part of the Independent Oversight Review team. The review scope includes MCR cost estimates, schedules, and effective integration with asset management and O&M/outage projects.

Sean has a bachelor's degree in Civil Engineering from the University of Illinois and an MBA from North Central College in Naperville, Illinois. His global engineering and consulting experience includes projects throughout North America, Central America, South America, Europe, Asia and the Middle East. He has successfully led projects and consulting engagements in most power generation technologies, including nuclear power plants (BWR, PWR and CANDU reactors), community- and utility-scale renewable energy projects (wind, solar PV, solar CSP and biomass projects), fossil fueled power plants (coal, heavy oil, ore emulsion and both simple and combined-cycle natural gas units), grid interconnection and electric power transmission projects. He is a Registered Professional Engineer in Illinois and Tennessee.
